

Applied Medical Environmental Policy

It is the policy of Applied Medical to conduct our global operations in an environmentally responsible manner. As a global medical device manufacturer, we are accountable to our team members, customers and the communities where we work and live to help protect our earth's resources. Therefore, we consistently engage in sustainable practices that positively impact our environment and our world.

Our environmental sustainability initiatives focus on four key areas: energy usage, water consumption, greenhouse gas (GHG) emissions and waste generation. We are committed to continually assessing and tracking our impact in these areas and prioritizing strategies to further refine these efforts.

We are dedicated to improving our environmental management system and strive to utilize our resources efficiently and responsibly. We comply with all applicable international, national, provincial, and municipal environmental laws and regulations.

We have established a Corporate Social Responsibility Committee to discuss and address global sustainability efforts and initiatives. In addition, our ProTerra Committee, made up of global team members, is designed to promote companywide education and awareness programs to encourage sustainability through recycling and other efforts.

As part of our company's mission of making a meaningful, positive difference in everything we do, we understand the vital importance of caring for and protecting the environment – now and for generations to come.
